#### 4 pmod-ethernets

pico2-ice PipelineC pmod-ethernet MAC a7:b1:c2:d3:e4:f5

pico-ice PipelineC pmod-ethernet MAC a8:b1:c2:d3:e4:f5

pico-ice PipelineC pmod-ethernet MAC a9:b1:c2:d3:e4:f5

Catboard PipelineC pmod-ethernet MAC a0:b1:c2:d3:e4:f5

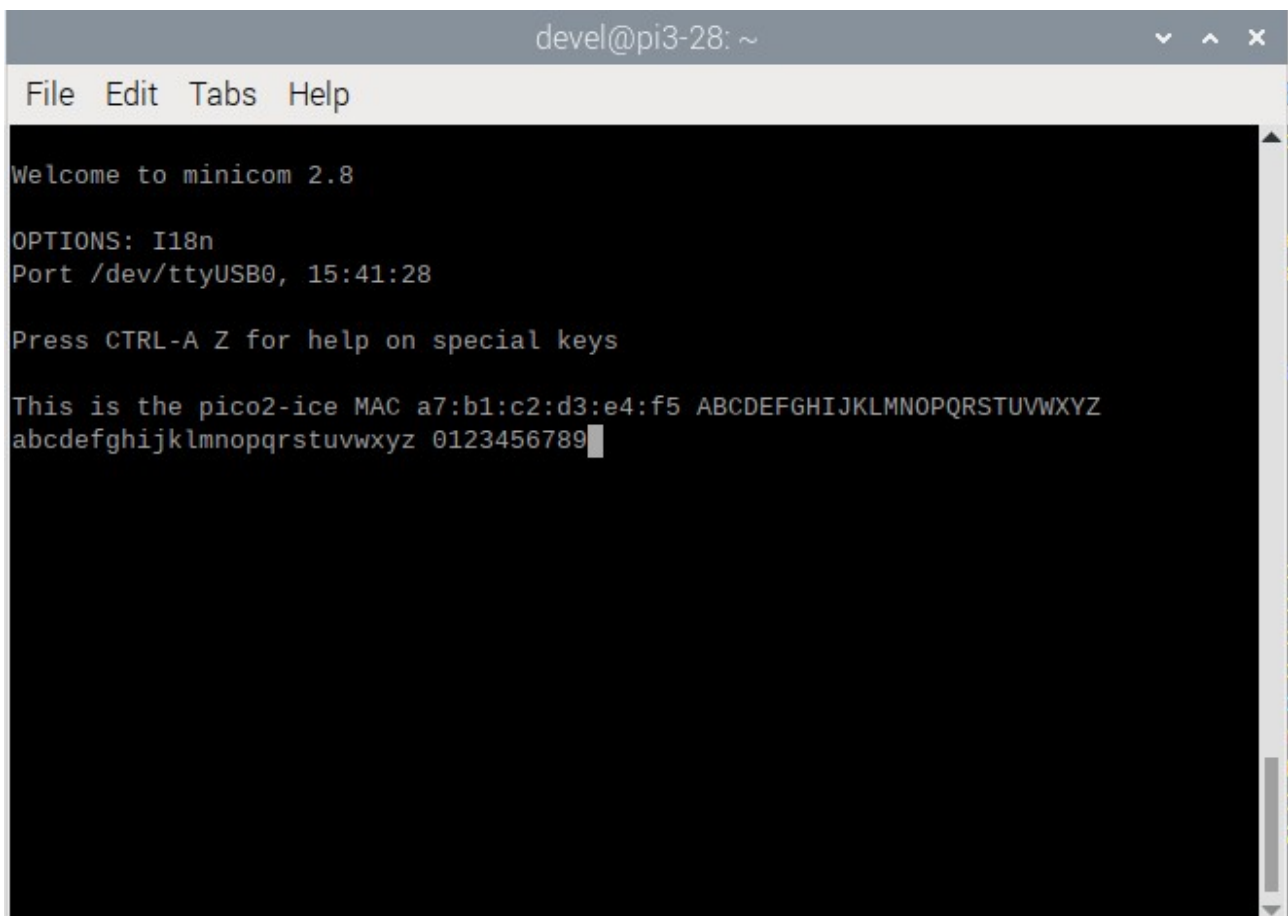

gateway.bin and gateway.uf2 created with oss-cad-suite

OVHcloud VPS Ubuntu 24.04

10/31/25

\*\*\*\*\*Default\*\*\*\*\*

Currently only the pico2-ice with FTDI2USB provides uart-echo

```
devel@pi3-28: ~
File Edit Tabs Help

Welcome to minicom 2.8

OPTIONS: I18n
Port /dev/ttyUSB0, 15:41:28

Press CTRL-A Z for help on special keys

This is the pico2-ice MAC a7:b1:c2:d3:e4:f5 ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz 0123456789
```

This is list of ports on pi3-28

```
devel@pi3-28:~ $ ls /dev/ttyACM*
```

```
/dev/ttyACM0 /dev/ttyACM2 /dev/ttyACM4 /dev/ttyACM6 /dev/ttyACM8
```

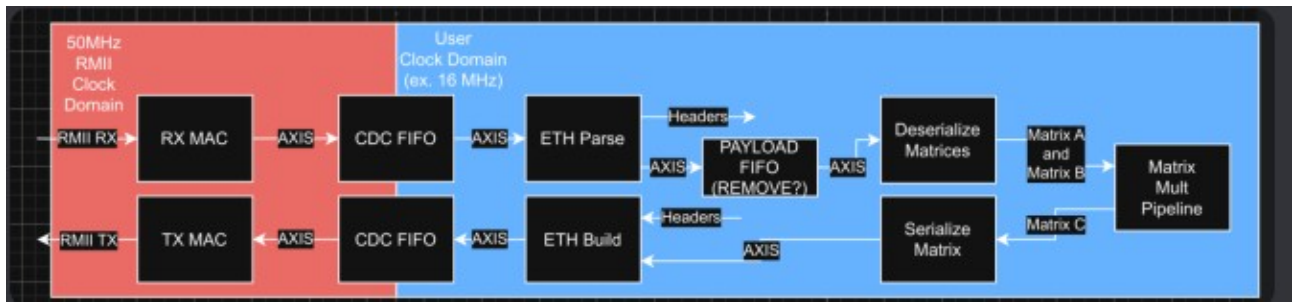

```
/dev/ttyACM1 /dev/ttyACM3 /dev/ttyACM5 /dev/ttyACM7
```

These port should be providing uart-echo

/dev/ttyACM1 should be providing uart-echo

/dev/ttyACM4 should be providing uart-echo

/dev/ttyACM7 should be providing uart-echo

XX

with those and the work() pipeline looks like so

Can come over to [# pipelinec](#) to hear more about this first demo of configuring the inputs work func and outputs to do 2x2 int8 matrix multiplication

RPi3 with Catboard 2 pico-ice and pico2-ice

RPi3 w/Catboard  
pmod-ethernet
